In 1984, OPI started with a dream to add value to the family farm. Owner, Dave Crompton, and his family constructed the first cable on their kitchen table. From humble beginnings came a proven technology.

Decades later, with the support of valued partners, the mission of perfecting the art of in-bin grain management continues. OPI empowers over 25,000 customers in over 75 countries to ensure every grain gets to market. Inside the walls, it employs talented visionaries that unite technologies latest innovations and agriculture.

1984

Developed automated monitoring and alarm system capability.

OPI incorporated, introducing the first Western Canadian on-farm bin monitoring system.

1988

Introduced the OPI GIMAC PC-based monitoring alarm and control platform.

1996

Pioneered digital sensing technology into the grain storage industry.

1998

Developed insector insect detection technology.

2005

Customer Care program launched to support customers to gain maximum benefit from their system.

2009

Pioneered in-grain moisture sensing technology.

2011

30 Years of grain monitoring expertise via wireless/solar technology and app based remote connectivity through OPI BLUE.

2014

Introduced CO₂ sensing technology and OPI BLUE Lite handheld.

2023

40 Years of advanced grain management celebrated with R&D towards the next gen of OPI technology.

2024

Launch of OPI EPIQ grain monitoring and OPI OMNI 3-in-1 cable sensor solution.

2025

Changing the Story

Adding value to the family farm and contributing to the sustainability of the global population is of vital importance. Whether on a farm or within the commercial market, the state of stored grain serves as a barometer for overall performance.

Maybe you have or know someone who has lost a bin to spoilage. Worse yet, maybe you've lost a friend or family member who entered the bin to clean it out. Or you are delivering grain too soon or too dry and losing valuable earnings. **OPI aims to eliminate losses with technology.**

Fear not, we offer grain storage management for every type of grower. Tech-averse or technology-driven, we have a solution to fit your operation. From handheld access to full automation, explore the OPI Value Escalator to see where you are comfortable getting started.

We invite you to grow with us as you learn the software and discover untapped value! Our team and global partners are ready to help.

Know Your Worth

WHY RISK IT? Try this FREE and EASY START to grain management.

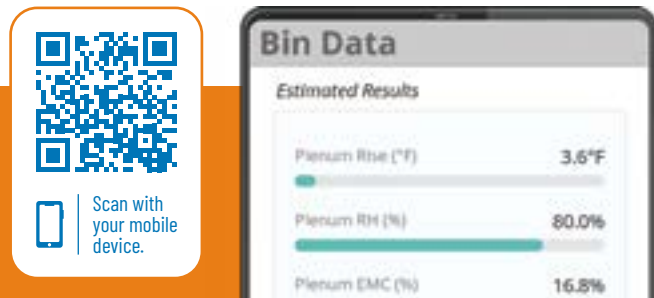

1 OPI EMC CALCULATOR

Start with the OPI EMC calculator to understand the science behind grain conditioning. Simply enter your grain and temperature information for the optimal performance formula.

2 OPI BLUE SEED

Once you understand the levels of optimization, visit ManageGrain.com to gain free access to OPI Blue Seed. Enter your operation info and start manually tracking weather and temperature data exclusive to your area. No hardware required.

3 OPI GRAIN MANAGEMENT SYSTEM

When you're ready to save time, money, and gain peace of mind visit your local dealer or OPIsystems.com to request a quote to deploy hardware, with or without automation. OPI systems are easy to install, offer energy savings, and deliver 24/7 monitoring and alerts. You'll appreciate the ease of use.

Included with all OPI Grain Management Solutions:

CUSTOMER SUPPORT

Trust our Team. The OPI customer support team and our Channel Partners are ready to optimize your grain management practices. If technology eludes you, lean on them to establish your goals and automate custom alerts.

EDUCATION AND TRAINING

Education is key. We offer a variety of training opportunities to build confidence in your grain management plan. From digital learning to in-person courses, we want you to understand the opportunity that comes with hardware installation and software utilization.

"IntegrisPro is hands down the best thing you can do for your grain system."
~ Cole Pectorious

Note: Investment variance reflects number of cables and grain distribution (ex: 200k bu. in 10- 20K bins will cost different than 200K bu. In 4 - 50K bins).

* Requires a Weather Station

OPPORTUNITY GRAIN MANAGEMENT

Know Sooner, Perform Better

Add an OPI Grain Quality Sensor (GQS) to your operation to detect the first sign of spoilage. The GQS is a CO₂ monitor that alerts to biological activity that can damage grain. Add this tool to head space and plenum for best results.

3-in-1 Cable Solution

OMNI delivers the grain inventory level, moisture, and temperature data you need to protect your harvest and make better decisions. Best of all, it provides these capabilities at no additional cost compared to moisture-only systems.

Benefits

- Lower operational and implementation costs
- Problem area detection
- Reliable performance year-round, in any condition
- Safer storage, maintenance-free
- Comprehensive data in one view

Features:

- 3-in-1 sensing for grain inventory level, temperature, and moisture
- Near-instant level detection on line-powered systems, hourly on solar powered systems
- High dust-resistant optical window and sealed construction
- Designed for harsh conditions from -40°F (-40°C) to +140°F (60°C)
- Seamless integration with EPIQ, BLUE Lite, and managegrain.com
- Patent-pending solid-state technology with no moving parts

For growers and commercial operators seeking a smarter, safer, and more efficient way to manage grain, OMNI delivers unmatched control and peace of mind.

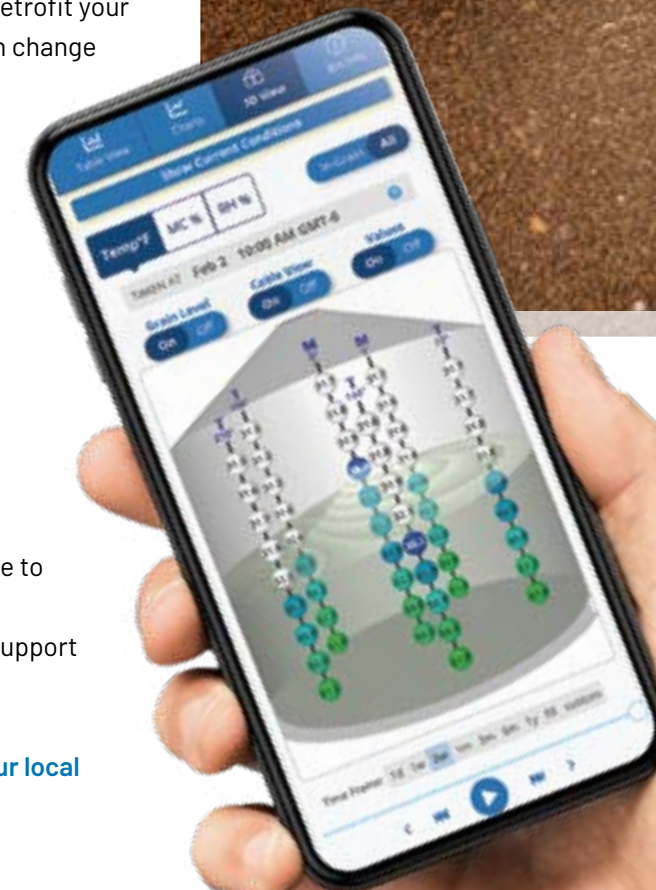

Find Value In Today's Volatile Environment

As production costs continue to increase and our world recovers from a global pandemic, OPI grain management offers you an opportunity to change the conversation. Avoid market losses and plan for success by optimizing conditions and storing grain until markets are the most favorable.

One quick and easy decision to retrofit your bins or upgrade new grain bins can change the course of your operation.

- Minimize shrink with moisture control
- Identify hotspots or infestations with temperature monitoring
- Monitor CO₂ levels for early indication of spoilage
- Optimize energy use with automated fan control
- Track inventory levels
- Store longer with confidence to secure market premiums
- Rely on the industry's best support team and dealer partners

Get started today by visiting your local dealer or requesting a quote at OPIsystems.com.

EVERY GRAIN TO MARKET.

Peace of Mind

24/7 monitoring and control results in grain in condition. Achieve zero entry and stop climbing bins to check condition.

Best Practices

Over 40 years of experience has resulted in proven, reliable products that are easy to install and service.

ROI

Safe storage practices make a difference to your bottom line. Carry longer and deliver better quality grain when the market is favorable.
